JSTOR is a digital library of academic journals, books, and primary source objects. JSTOR helps people discover, use, and build upon a wide range of content through a powerful research and teaching platform, and preserves this content for future generations. JSTOR is part of ITHAKA, a not-for-profit organization that also includes Ithaka S+R and Portico. For more information about JSTOR, please contact support@jstor.org.

In India during the week ended July 14, 1906, there were 450 cases and 346 deaths from plague.

Mortality in the Punjab in 1905.

The Punjab, for the fourth successive year, shows the highest rate of mortality in India in 1905. Of a total of 956,108 deaths which occurred in the province, 334,897 were due to plague, the ratio per mille from this cause alone being 16.65.

The sanitary commissioner for the Punjab remarks that since the appearance of plague there have been 1,127,186 deaths recorded from the disease. The registered deaths from "fever" are much more numerous, numbering 3,925,247. Calculating from the last census in 1901 the deaths from fevers during the four years and nine months have numbered 2,239,146 and from plague 1,122,977, making a total of 3,362,123 from these two causes alone.
